

"Flowpoint has a qualified team of electricians, certified backflow preventor testers, water treatment plant and wastewater treatment plant operators, and technicians that can help you maintain and repair your facilities."

FLOWPOINT

BACKFLOW PREVENTOR TESTING, REPAIR, AND CERTIFICATION

"Let Flowpoint certify the backflow preventors on existing Flowpoint Bulk Water Dispensing Stations or any reduced pressure backflow preventors on your distribution system."

ENGINEERING AND DESIGN

"Like a snowflake, no two Flowpoint systems are the same. Each one is unique and engineered to order."

"We don't have a warehouse full of turn-key systems. Each Flowpoint system is engineered to order. "

CUSTOM CONTROL PANELS

"At Flowpoint, we are a CSA / UL Certified Panel Shop.

While bulk water dispensing and septage receiving station controls are our bread and butter, call us today if you have a specialized control panel you want to be built."

CUSTOM CLOUD-BASED SCADA SOLUTIONS

"Let Flowpoint work with you to design or redesign your SCADA system. Utilizing the cloud, we can help you manage and monitor your water or wastewater facilities online over a secure website portal."
